SUMMARY

Engineer and tech lead with **5+ years building production software**: 3+ years full-time at Docplix (after a 1-year internship there), plus freelance and part-time client work since late 2020 (web apps, React Native and Flutter apps). Builds clinical software where a mistake reaches a patient: an **AI medical scribe live with a pilot group of clinicians**, **FHIR R4 / HL7 interoperability for India's ABDM**, and the **multi-tenant, white-label EHR** it runs on: **2,000+ clinics and hospitals, hundreds of thousands of patients, 100+ specialties**.

EXPERIENCE

Docplix — multi-tenant, white-label EHR / healthcare SaaS

Software Development Engineer II (Tech Lead) | Jul 2025 – Present

Software Development Engineer | Jul 2023 – Jul 2025

Software Development Engineer Intern | Apr 2022 – Mar 2023

- **AI medical scribe** (live with a pilot group of clinicians; some AI features in production): built as Python services. Ambient speech-to-text captures the consultation, an LLM drafts structured clinical fields, and the clinician reviews, edits and signs; nothing reaches the patient record before that step (human-in-the-loop design).
- **Speech recognition:** led the team's speech-model (Whisper) fine-tuning for the scribe's speech-to-text layer.
- **FHIR R4 / HL7 for ABDM**, India's national digital-health mission: built FHIR document bundles, validation and HL7 terminology into the EHR.
- **Multi-tenant EHR:** per-tenant isolation, per-clinic modules (OPD, IPD, pharmacy, lab), branding and configuration; serves 2,000+ active clinics and hospitals and hundreds of thousands of patients across 100+ specialties.
- **White-label platform:** dozens of white-label deployments on one core; drove the effort to bring client forks back onto one codebase.
- **Code ownership:** #1 all-time contributor to the core EHR frontend and one of the principal contributors to the core platform; runs hiring, mentoring and code-review standards for the team.
- **Platform:** set up automatic deployment on every merge across the platform; consolidated the repositories into one GitHub organisation; led an AWS cost-optimisation initiative; optimised PDF/document generation.
- **Mobile:** React Native clinician and patient apps on the App Store and Google Play (Hermes, Fastlane, CodePush OTA); led a major React Native upgrade.

Full-Stack Developer (part-time) — Augur IT Consulting | Aug 2021 – Mar 2022 | React and Node.js client work

Freelance | 2020 – 2023 | WoodVer Reward, a Flutter loyalty app (2021, 500+ installs), plus client web and mobile builds

Web Developer Intern — Dehra Productions | Dec 2020 – Feb 2021 | client sites, incl. a React/GraphQL microsite

SELECTED PROJECTS

Letsdrive | independent client project, 2024–25 | carpooling + car-rental marketplace built end to end, solo: Flutter app, TypeScript/Express/Prisma API on PostgreSQL, Next.js admin.

Verbatim | side project | live AI feedback-intelligence demo (React, serverless, LLM) that clusters raw feedback into ranked themes with click-to-verify quotes.

SKILLS

Languages: TypeScript, JavaScript, Python, Dart

Apps: React, Next.js, React Native, Flutter, Redux

Backend & data: Node.js, Express, Flask, Socket.io, Redis, MySQL, PostgreSQL, Prisma

Cloud: AWS (ECS, EC2, S3, CloudWatch, Polly, Translate), Fastlane, CodePush

Health & AI: FHIR R4 / HL7 / ABDM, LLM integration, structured outputs, multi-provider fallback, speech-to-text

EDUCATION & AWARDS

B.Tech, Computer Science — Graphic Era Hill University, Dehradun | 2019 – 2023 | GPA 8.5

Tech Lead & Mentor, Google Developer Student Club (2020 – 2022): founded the technical track; 900+ students | Engineering excellence award (2023)
